Abstracts

Wearable computing product sales are being driven by technological advancements in wearable devices, expanding consumer acceptance of wearable technology such as fitness bands and smartwatches, and the growing attraction of wearable medical and health equipment. Swimmers, sportsmen, runners, gym goers, and bikers are increasingly using smartwatches and fitness bands, driving up demand for wearable computing devices globally. Smartphones and other Internet of Things (IoT) devices are increasingly integrating wearable gadgets.

This connection enables smooth data transmission, remote control, and an improved user experience. Wearables are an extension of the smartphone ecosystem since they can show notifications, manage music playing, and even answer phone calls. Fitness trackers, smartwatches, and health monitors have grown in popularity because they give real-time data on heart rate, sleep habits, step count, and other health-related parameters, allowing people to monitor and manage their health. For example, Apple Inc., located in the United States, introduced the Apple Watch, a popular wristwatch that combines health and fitness features with other smartphone functions. Heart rate monitoring, ECG measurement, fall detection, and workout tracking are all included.
