KEY FINDINGS

The Europe MRI systems market was valued at \$1579.84 million in 2016 and is expected to reach \$2417.90 million by 2025 growing at a CAGR of 4.885% during the forecast period of 2017-2025. This growth can be attributed to the rise in chronic diseases, high incidences of accidents and injuries and the growing elderly population.

MARKET INSIGHTS

The market segmentation is done on the basis of the type of technology (MR angiogram, MR venogram, functional MRI, NMR spectroscopy, etc), on the basis of application (for whole-body, interventional, brain & neurological disorders, breast, cardiac, other); on the basis of architecture (open/ close MRI systems); and on the basis of the basis of field strength (low, mid, high, very high and ultra-high field MRI system). Although the increasing healthcare expenditure and the growing demand for minimally-invasive procedures are propelling the market growth, the market might face some restraints due to factors such as regulatory issues, lack of skilled professionals and the reduced reimbursement rates.
