Abstracts

R&D in China in the field of audio-visual technology* has surged over the last decade. This report seeks to answer the following questions related to this surge in R&D:

Where in China does the R&D in the field of audio-visual technology take place?

What companies and academic institutions in China are driving this R&D effort?

What has been the focus of Chinese R&D in the field of audio-visual technology?

The foundation for the study has been the complete database of Chinese invention patents and patent applications from the State Intellectual Property Office of China. This database has been supplemented with geographical data, thereby providing information on the ‘who’, ‘what’, ‘where’ and ‘when’ of invention in China. Only patents with Chinese priority have been included in the analysis, i.e. not patents filed elsewhere but extended to China.

The following information is included in the report:

The top 20 cities with regards to the number of patent applications in the field of audio-visual technology, along with the number of applications and share of all applications in each city.
