Abstracts

The Asia Pacific Advanced Process Control (APC) Market would witness market growth of 11.3% CAGR during the forecast period (2019-2025). The demand from users has increased, and so has the adoption of processing practices that focus on quality. This trend can be attributed to the escalated competitiveness in the market, which has prompted substantial growth in APC software installation for product development. Advanced process control devices also allow for quality improvement, letting the processing organizations retain their competitive edge. On the other hand, small-scale organizations might hold back from deploying APCs. This can be linked to the low availability of skilled professionals and the necessity for high initial investments.

APC is a process control system based on closed-loop software that enables increased productivity, reduces waste, and enhances quality assurance under real-world operating conditions. Through allowing the easy implementation of technologies like model predictive control and advanced computing systems throughout the processing and manufacturing industries, the use of APCs has allowed businesses to increase consumer affordability. In addition, APC technologies also help reduce the lead time to reduce the associated operating costs.

Based on Application, the market is segmented into Hardware, Software and Services. Hardware segment is further bifurcated into Control Systems, Interface & Display, Computing Systems and Others. Based on End User, the market is segmented into Oil & Gas, Chemicals, Food & Beverages, Energy & Power, Mining & Minerals, and Metals, Pharmaceuticals and Others..
