Abstracts

The Asia Pacific Airway Clearance System Market would witness market growth of 6% CAGR during the forecast period (2019-2025).

Adoption of airway clearance devices to treat cystic fibrosis, neuromuscular, bronchiectasis is expected to drive the growth of the market. These devices help with the expansion of the lung and clear the accumulation of excess mucus thereby allowing the patient to breathe properly. The use of various forms of airway clearance devices is expected to see a rise with the widespread high prevalence of cystic fibrosis.

Indoor air pollution exposure can affect the unborn child and constitute a risk factor for COPD to grow later in life. Some COPD cases originate from long-term asthma. Owing to the higher smoking rates and aging populations in many nations, COPD is expected to rise in the coming years. Most COPD cases are preventable by smoking avoidance or early cessation. It is therefore critical that countries adopt the WHO Tobacco Control

Framework Convention (WHO-FCTC) and introduce the MPOWER package of measures so that non-smoking becomes the standard globally. COPD is not curable, but treatment can relieve symptoms, increase the quality of life, and reduce death risk.

Chronic obstructive pulmonary illness is a lung disease that is characterized by chronic airflow loss. COPD symptoms are slowly deteriorating and recurrent breathlessness on exertion, ultimately leading to unstable breathlessness. This tends to be diagnosed under the circumstances of relationships and can be life-threatening. The more common words for the disease were also used as labels for "chronic bronchitis" and "emphysema."

Based on Type, the market is segmented into Positive Expiratory Pressure (PEP), Mechanical Cough Assist, High Frequency Chest Wall Oscillation (HFCWO), Oscillating PEP devices and Intrapulmonary Percussive Ventilators.
