Abstracts

The Asia Pacific Automotive Motor Market would witness market growth of 7.9% CAGR during the forecast period (2019-2025).

The automotive market is controlled by an increase in overall vehicle production and a high demand for safety and convenience features. In addition, the rise in the popularity of electric vehicles is expected to create a potential for various developments in electric motor vehicles. The increase in the number of motors installed in a car translates directly into better intelligence and increased convenience by reducing the environmental impact. Nonetheless, an increase in the weight and cost of the overall system limits market growth. In addition, a growing number of applications involving the use of electric motors and the idea of self-propelled cars are expected to create lucrative opportunities for the automotive market in the near future.

The automotive market is positively affected by the safety regulations put in place by the Government for the installation of power windows, airbags and anti-lock braking systems (ABS) in each vehicle. In developing countries, OEMs are offering the key less entry and anti-lock braking system (ABS) as standard features in vehicles, enabling the government to improve safety measures that boost the selling of automotive motors. These safety systems require separate engines to operate smoothly and to communicate with other vehicle components in order to provide passengers with complete safety. As the incorporation of safety features has therefore been made mandatory, it is anticipated that the demand for automotive motors will boost, fueling the growth of the automotive market.
