Abstracts

The Asia Pacific Biosurgery Market would witness market growth of 8.3% CAGR during the forecast period (2019-2025).

Biosurgery has also been labeled as maggot therapy or larva therapy. These maggots or larvae can heal chronically-infected wounds that resist antibiotics. A biosurgery procedure with maggot debridement therapy has proven to be effective for diabetic patients. The increased prevalence of diabetes and spinal injuries is expected to sustain the demand for biosurgery in the years to come. Additionally, biosurgery is also useful for neurological, orthopedic, and gynecology surgeries. This can substantially boost the product demand.

Increased demand for minimally invasive surgery alongside the continual rise in the geriatric population suffering from chronic conditions is projected to expand the biosurgery market. Biosurgery products can reduce the risks that might occur due to tissue contamination. This can significantly drive demand. Moreover, effective measures for blood loss during surgeries are likely to boost the adoption of these procedures over the forecast period.

The Asia Pacific (APAC) region is expected to emerge as a major region for biosurgery with the highest growth rate over the forecast period. Japan was one of the dominant countries in this region during 2018 because of its huge geriatric population and swift economic growth. Moreover, an increase in the awareness about the advanced surgical procedures is projected to boost the market growth during the forecast period.

Based on Application, the market is segmented into General Surgeries, Orthopedic Surgeries, Neurological Surgeries, Cardiovascular Surgeries and Other Applications.
