## Abstracts

The Asia Pacific Brain PET-MRI Systems Market would witness market growth of 9.3% CAGR during the forecast period (2020-2026).

The combination of MRI with PET is viewed as one of the best efficient hybrid imaging frameworks in the field of neurology. MRI viability in imaging the morphology of the brain and presence of MRI modalities for surveying physiologic and metabolic variables like perfusion, edema, vascular supply, and functional activation is anticipated to add to its adoption alongside PET frameworks. Hence, combined data from MRI and PET hybrid breed imaging framework assists in the upgraded diagnosis of neurological disorders.

The use of brain PET-MRI frameworks for preclinical imaging is progressively expanding, which thus is making various opportunities for players to enter this market. In September 2016, Aspect Imaging collaborated with Seoul National University to introduce Preclinical PET-MRI Complete Solution at World Molecular Imaging Congress (WMIC) in New York. This framework was developed by joining Aspect Imaging's M7 compact MRI and SNU novel PET insert 'SimPET'. Business accessibility of this device is assisting researchers to direct research in various fields including neurology.

Makers of PET MRI scanners are moving to innovations and item particulars that will in general consume lesser efforts for production and offer non-invasive diagnosis, reliability of the screening results and testing with lesser tracer doses and low ionizing radiation exposure as observed in PET/CT scanners or invasive staging methodology

like a biopsy. Workflow management that was known as an obstructing factor in working of customary modalities like PET/CT or sequential PET/MRI scanners because of the need for moving patients starting with one device then to the next is overcome. Advancements in technology of tracers have prompted the need for a lesser amount of tracer doses and faster outcomes are anticipated to guarantee comfort for individuals previously experiencing different sorts of dementia. Features like these are foreseen to give added incentives for healthcare services experts to pick PET MRI-based imaging.

Based on Phase Type, the market is segmented into Pre-clinical and Clinical. Based on End User, the market is segmented into Hospitals, Diagnostic imaging centers and Other End Users. Based on Product, the market is segmented into Helium-free PET/MRI Systems, Traditional PET-MRI System. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
