Abstracts

The Asia Pacific Cartilage Repair Market would witness market growth of 9.8% CAGR during the forecast period (2018 – 2024).

When damage is caused in the cartilage, it restricts the regular movement of the knee, causing immense pain. It generally occurs after a traumatic and twisting injury to the knee. If cartilage damage remains untreated, it would lead to knee replacement surgery. The tissue prevents friction between the bones, by absorbing shock in the joints. Asia-Pacific has huge growth potential and would grow at a notable rate during the forecast period. The growth is primarily attributed to the technological advancement in the field of cartilage surgery and swift rise in demand primarily in developing countries such as Japan and China. Moreover, Emerging markets are a highly potential market; therefore, vendors are majorly focusing on Asia-Pacific for expansion activities.
