Abstracts

The Asia Pacific Companion Diagnostics Market would witness market growth of 21.6% CAGR during the forecast period (2019-2025).

A number of businesses have conducted projects to create biomarker-based therapeutics for other signs of illnesses, including infectious conditions, neurology, and metabolic disorders. Stakeholders in the industry are crafting strategic alliances with the development of diagnostic alternatives for a range of drugs/therapies. Such initiatives focus on enhancing the success rates of clinical trials, thereafter optimizing research and development expenses in the pharmaceutical sector.

In the forecast period, the Asia-Pacific growth rate is anticipated to be highest, mainly owing to increasing demand for personalized medication, the development of health facilities as well as increasing prevalence of different types of cancer that have more unmet needs. The cost efficiency, high sensitivity, and specificity are several main driving factors for market expansion and can be used in simple automated systems. The PCR, which is another important driver of this section, can also determine the sequencing of unknown disease etiologies of many diseases.

Based on Technology, the market is segmented into Immunohistochemistry, Polymerase chain reaction (PCR), Next generation sequencing (NGS), In Situ Hybridization, and Other Technology. Based on Indication, the market is segmented into Oncology, Neurology and Other Indications.
