Moreover, these vehicles are fitted with cameras that provide computer

vision to compute steering angles, read road-signs, and help make critical on-road decisions, like giving way to ambulances and fire engines.

The manufacturing industry is facing the most widespread use of automation and robotics. Since the manufacturing facilities are shifting towards fully-automated manufacturing, that's why it requires more intelligent systems that can monitor industrial processes. While the introduction of the Internet of Things (IoT) is also bringing a revolution in the manufacturing sector and it is resulting in making industrial operations more autonomous. Computer vision also assists in improving the manufacturing sector in the form of machine vision. For example, machine vision is beneficial for quality inspection of the products by detecting non-conformities and defects.
