Abstracts

The Asia Pacific Contrast Media Market would witness market growth of 4.9% CAGR during the forecast period (2019-2025).

The Asia Pacific Contrast Media Market is growing at a fast pace. The ophthalmic laser market is expected to see remarkable growth in the forecast period due to an increase in the number of aging populations, increased research and development activities in the field of imaging modalities, demand image-guided techniques, and an increasing incidence of chronic diseases. Nonetheless, adverse reactions of contrast media on the body and the enormous costs involved hinder the market growth. Due to the huge population, China and India are likely to witness an increase in demand.

For MRIs, contrast agents minimize nuclei relaxation times within the tissues of the body to modify the contrast in an image. Gadolinium is a contrast agent used in MRI. The metal has seven unpaired electrons in the 3+ oxidation state, which helps water to relax quickly around the contrast agent, thereby improving the quality of the MRI scan. MRI contrast agents are commonly used to enhance the disparity in the contrast between normal and abnormal tissues. MRI contrast agents can be administered either

orally or intravenously.

Based on Product Type, the market is segmented into Iodinated, Barium-based, Gadolinium-based and Microbubble. Based on Application, the market is segmented into Neurological disorders, Cancer, Cardiovascular disorders, Gastrointestinal disorders, Nephrological disorders, Musculoskeletal disorders and Other Applications. Based on Modality, the market is segmented into X-ray/CT, MRI and Ultrasound.
