## **Abstracts**

The Asia Pacific Crawler Camera System Market would witness market growth of 12% CAGR during the forecast period (2020-2026).

Crawler cameras are often used to reach inaccessible areas, like flood drains, restricted pipes, bulging pipe taps, and internal water sewers, and are fitted with internal batteries and CCTV cameras, allowing easy access to every remote location. The adoption of pipeline inspection systems has diminished with premium system prices and associated accessories. End users from Asia region are focused largely on providing a cost-effective solution for waste management and sewage management activities due to limited repair and maintenance expenditure by government authorities.

In addition, the manufacturer is mainly competing on the basis of the differentiation between products. Thus, these manufacturers are introducing high-priced novel products that further reduce the overall adoption of crawler camera systems. In addition, the novel products are equipped with various services such as software services, maintenance services that are more expensive for residential end-users. Collectively, the above factors reduced the overall penetration of crawler camera systems.

Many sewer lines run through their entire service life without any problems at all. Sewer lines are passive storage structures, unlike water services which are pressurized.

Constant pressure is much more likely to take its toll on water lines that tend to leak or freeze when exposed to sub-zero temperatures. Sewer lines are also subject to less flow than storm drain lines, which carry massive water runoff during heavy rainfall.

Based on Application, the market is segmented into Pipeline Inspection, Drain Inspection and Other Inspection (Tank, Void, Cavity). Based on End Use, the market is segmented into Municipal, Industrial, Commercial and Residential. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
