Abstracts

The Asia Pacific Data Acquisition System (DAQ) Market would witness market growth of 6.7% CAGR during the forecast period (2019-2025).

Data acquisition (DAQ) is a method for measuring electrical or physical phenomena such as voltage, current, temperature, pressure, or computer sound. The DAQ device consists of sensors, DAQ measuring hardware and a computer with programmable applications. Compared to conventional measurement systems, PC-based DAQ systems use the processing power, productivity, display and networking capabilities of industry-standard computers to provide a more efficient, versatile and cost-effective measurement solution.

Asia Pacific is a lucrative market for data acquisition systems due to support policy initiatives, increased industrial automation and broader acceptance of SCADA, PLC and HMI technologies. Governments in developing economies, such as India and China, are encouraging smart manufacturing through initiatives such as 'Make in India' and 'Made in China 2025'. For example, in 2018, the Chinese Government selected 97 pilot projects to introduce smart manufacturing projects under the Government's 'Made in

China 2025' initiative to facilitate the deployment of the industrial IoT network. The robust growth of the network and manufacturing infrastructure in the area is fueling market growth. Major technology companies are widening their businesses in the area to support the increasing adoption of smart industries in the region.
