Abstracts

The Asia Pacific Data Center Infrastructure Management (DCIM) Market would witness market growth of 23.8% CAGR during the forecast period (2020-2026).

DCIM solutions can provide data center managers with the insight, information, and tools they need to simplify and streamline operations, automate data center asset management, maximize the use of all resources – infrastructure, space, power, cooling, and personnel – cut costs, project data center capabilities to meet future needs, and even extend data center existence. The trend towards leveraging and building ever larger data centers has been motivated primarily by economies-of-scale benefits. Technological developments such as Web-based applications, device virtualization, more efficient servers delivered in a smaller footprint, and an overabundance of low-cost bandwidth, have exacerbated and encouraged this phenomenon. Not many years ago, most computer sites were small enough to allow local, devoted IT and facilities workers to handle everything with manual processes and resources, such as spreadsheets and Visio diagrams, reasonably. This has now become abundantly clear that IT and facilities professionals need improved resources and processes to handle the vast inventory of physical assets and the complexities of modern data center technology in an efficient way.

Datacenter providers are developing rapidly at locations and on a scale that will cater to major IT and cloud companies. Nonetheless, demand for smaller, edge datacenters connected to 5G and IoT deployments is also expected to emerge in the future. This

could lead to facilities through that are not 'traditional' datacenters. Others might support megawatts of IT capability, be highly connected, and include multiple power delivery and storage systems for energy efficiency and availability, like smart buildings and factories.

Based on Component, the market is segmented into Solution and Services.
