Abstracts

The Asia-Pacific region would be the fastest growing region within the data fabric market, due to increasing adoption of Internet of Things (IoT) and smart technologies. Various government initiatives such as smart cities across Asia-Pacific region would further add to the market growth. The purpose of the data fabric is to clear the storage sprawl used by organizations to address data sprawl. Data sprawl is the result of the growing number of use cases for IT such as multiple types of databases (relational & NOSQL), unstructured data types (legacy NAS, high performance NAS and data analytics) and the core demands of virtualization (server, desktop and containers). Nevertheless, due to limited options, organizations are forced to buy a unique storage system for each of the use cases. Therefore, the whole exercise has resulted in unprecedented storage sprawl within data centers over the last few years.
