Abstracts

The Asia Pacific Digital Holography Market would witness market growth of 22.4% CAGR during the forecast period (2019-2025).

The digital holographic system is made up of different kinds of hardware components for the acquisition and reconstruction of images. Such hardware components include lasers, CCD or CMOS sensors, beam splitters, beam combiners, space filters, mirrors, projection systems, and digital micromirror devices. CCD or CMOS cameras are the most essential components for the acquisition of images. Since the cost of CCD cameras is higher than other components used in digital holography, these cameras have the largest market size. Software components allow the specimen to be captured effectively.

Digital holography is commonly used for different purposes, such as microscopy, surface measurement, interferometry, storage, and 3D display systems. Several companies are designing innovative holographic displays for high-definition 3D visualization in the holographic display industry. The potential for these displays is expected to be huge across different industries, such as entertainment, retail, medical, public administration and others. This is expected to improve the demand for optical holographic displays in the future. 3D imagery has fascinated people for a long time and is the next major thing in the advertising industry. Such displays help to maximize the customer's experience. Holographic displays in the commercial sector are projected to witness high demand in the years to come.
