Abstracts

The Asia Pacific Digital Wound Measurement Devices Market would witness market growth of 6.1% CAGR during the forecast period (2018 – 2024). Digital wound measurement devices are majorly put to use to accurately conduct wound measurement. The devices are used for three-dimensional measurement of a wound with the integration of electronic medical record (EMR) software. Digital wound measurement devices are 3D-enabled, and these devices measure wound dimensions (area, length, width and depth) and finally produce a visible record of these dimensions. These devices are used in converting line tracing into true area measurements and calculating change in the area of wounds over the course of healing. One unit refers to one DWM device. Rapidly changing lifestyle, which has led to growing cases of diabetic wounds and pressure ulcers, and rapidly growing geriatric population are the factors that would drive the growth of the market during the forecast period. Additionally, digital wound measurement methods offer information about the depth and volume of wound, which would drive the market growth.
