Abstracts

The Asia Pacific Driving Simulator Market would witness market growth of 9.9% CAGR during the forecast period (2020-2026).

Driving simulators are a crucial and essential part of driver training and education. It is as similar to the actual experience as possible with full-size replicas of the driver's cabin and a realistic virtual world. Simulators are good, practical and efficient learning tools for all drivers to provide safe driving, training strategies and skills.

The trainer covers many training levels ranging from basic familiarization of controls on the driver compartment to vehicle handling in difficult traffic conditions or all-terrain environments. This also provides effective crew and operational training combined with other virtual systems to create a combined training solution. Due to the full-scale model of the driver's compartment with working dash board with switches, buttons and gauges, it is easy to obtain familiarization training.

Automotive manufacturers are increasingly using simulators for driving and cars to refine design and streamline the R&D process. McLaren Group is one of the first and biggest users of driving simulation to help engineer passenger and commercial automobiles. The company tests the vehicle in a number of conditions, and each vehicle is tailored to suit specific customer requirements. Driving simulators are expected to be matured in the mainstream design and engineering sector, and are likely to generate steady demand until the end of the forecast period.
