Abstracts

The Asia Pacific Electric Heat Tracing Market would witness market growth of 7.1% CAGR during the forecast period (2017 – 2023). The major purpose that has led to the adoption of electrical heat tracing systems is to compensate heat loss and maintain the process temperature. Heating cables should not touch, crossover, and overlap post installation, as the overlapping of cables could result in overheating and burnout and would damage the heat tracing system. Self-regulating is the leading type of heat tracing cables. Self-regulating heating cables increase and decrease power as temperature changes; therefore, these cables are more energy-efficient over other cable types. These cables come with long lifespan and require less maintenance, making them preferred in various applications. Hence, self-regulating cables would significantly contribute to the growth of the market for electric heat tracing systems.

Based on Application, the market report segments the market into Freeze Protection, Process Temperature Maintenance, Viscosity Control, Roof & Gutter, Floor Heating, and Others. Based on Type, the Asia Pacific Electric Heat Tracing market segments the market into Self-Regulating, Constant Wattage, Mineral–Insulated, and Skin Effect. Based on Vertical, the market report segments the market into Oil & Gas, Chemicals, Power & Energy, Food & Beverages, Water & Wastewater Management, Commercial, Residential, and Others.
