The Asia Pacific Emission Monitoring Systems Market size is expected to grow at a market growth of 10.9% CAGR during the forecast period. The continued burning of coal to meet the unending energy needs, especially in developing countries such as China and India has led to the adoption of emission monitoring systems. As per the new Environmental Protection Law (EPL) in China, all coal-fired industrial units would have to comply with stipulated measures to monitor and control emission. Such favorable initiatives would drive the demand for emission monitoring systems. Additionally, growing awareness about the need to control pollution leading to hazardous effect on human health among the public welfare organizations has led to the green initiatives largely. Such initiatives contribute to the growth of the emission monitoring systems, which are used in measuring air quality index.
