The need for encryption is not merely the number of incidences, but also the complexity of threats. The organizations need to deploy more comprehensive, secure and reliable security technologies. In the initial days, the attacks were primarily on the enterprises; however, today the modus operandi is to hack personal computers and gain access to personal data.

Data theft can be conducted either by physically stealing devices or hacking into the personal system or a network. Amongst the many known causes of data breaches, hacking and malware have been identified as the most common today, and also are majorly used methods to steal data. Regulatory frame work set by the governments about data privacy and compliance demands tighter security measures. With stringent regulations, the need for effective data security technologies is vital.
