The Asia Pacific Endometrial Ablation Market would witness market growth of 7.0% CAGR during the forecast period (2018 – 2024).

Endometrial ablation is used in facilitating the destruction of endometrium or thin layer of the uterine wall, and is used in treating abnormal heavy uterine bleeding. Prolonged abnormal uterine bleeding could lead to low blood count and anemia. Endometrial ablation is a technique that has gained prominence as there is no need for incisions, and the technique is very popular among women suffering menstrual problems. Asia Pacific is the region with tremendous market potential, offering lucrative opportunities to market players. Growing prevalence of gynecological disorders due to limited awareness and poor standards of hygiene and high unmet medical needs would drive the demand for endometrial ablation procedures in this region.

Based on the end user, the market is segmented into Hospitals, Clinics, and Ambulatory Surgical Centers.
