Abstracts

The Asia Pacific Facial Fat Transfer Market would witness market growth of 11.9% CAGR during the forecast period (2019-2025).

Fat transfer, also known as autologous fat transfer or fat grafting, is mostly conducted to improve the aesthetic value of the face by minimizing smile lines or frown lines. As a result, an increase in the incidence of these conditions due to aging and pollution stimulates the demand for a facelift, thus driving the market for facial fat transfer procedures.

The popular concept of aging gracefully has raised the demand for plastic surgery treatments, including facelifts. Patients belonging to the age of 60s and 70s are also frequent visitors at plastic surgery setups for cosmetic surgery. Among all other procedures, facelifts and eyelid surgeries are the most prominent treatments. The contemporary innovative facelift technologies provide a seamless experience for older patients through ensuring less downtime and effective aesthetic results.

Plastic surgeons progressively recommend fat grafting for facial volume augmentation surgery. They base their recommendation on the benefits of facial fat transfer procedures over traditional dermal fillers. In comparison to conventional fillers, the results of facial fat transfer have a longer shelf life, have no or lesser side effects, and prove to be cost-effective in the long run.

The market in Asia-Pacific is projected to record a substantial growth rate over the forecast period due to the high success rate of facial fat transfer procedures. The visible growth in the number of hospitals and rising healthcare services are expected to support the growth of this region in the facial fat transfer market.
