## Abstracts

Adoption of GIS technology in the Asia-Pacific region is at its nascent stages, due limited awareness among the population in the region. With limited government initiatives for the implementation of GIS in government and private sectors, the market has enormous potential that can be tapped by early movers in the region. . Disaster management, land information, map viewing (cartography), infrastructure management, business information, military & defence (geopolitics), mineral exploration (geoscience), biological and others are the major applications of GIS.

The Asia-Pacific GIS market is segmented based on type into software, services and data. Based on verticals, the report segments the market into utilities, transportation, government agencies, retail, oil & gas, healthcare, financial services and telecom among others. For better understanding of the market penetration of GIS technology in Asia-Pacific region, the market is studied across countries, namely China, Japan, India, South Korea, Singapore, Malaysia and rest of Asia-Pacific. Japan and China have already started implementing GIS in various industries, as a data tool to gain effective information about the market and other related data.
