## Abstracts

The Asia Pacific Geospatial Solutions Market would witness market growth of 17.8% CAGR during the forecast period (2019-2025). There are hundreds of applications of geospatial technology in use today. Geospatial technology is used by organizations, agencies and businesses around the globe to convert manually generated maps and related descriptive documents into powerful digital databases. Once a device that only the biggest organizations could afford, geospatial facilities have become a cost-effective solutions for even the lowest organizations.

Also known as geographic information science, spatial science performs a significant part in many scientific fields as it aims to comprehend, evaluate and visualize real-world events by location. Space scientists apply techniques such as geographic information systems (GIS) and distant sensing to temporal (e.g., georeferenced) data in order to attain these goals—to define trends in space and create meaning. The real-time generation of virtual big data from geotagged social media posts on Twitter to environmental detectors gathering meteorological information is connected to the present age of big data.
