Abstracts

The Asia Pacific Hernia Repair Devices & Consumables Market is expected to grow at a CAGR of 8.5% during 2016 -2022.

The use of biological materials and mesh have had significant impact on the overall market. Stem-cell based biologicals have greatly enhanced the potential and have offered great advantages over other conventional technologies. Several R&D activities can be initiated by the major market leaders, for developing advanced stem cell based hernia repair meshes. Synthetic mesh manufacturers could focus on developing advanced synthetic meshes and work towards minimizing chronic pain and post-surgical complications.

The high cost associated with the development of hernia repair devices would hamper the market growth of hernia repair devices. Additionally, the cost associated with the technologically advanced biological meshes will also act as a market restraint and hamper the growth of hernia repair devices. Manufacturers must focus on the development of novel and innovative hernia repair products, whilst working on the costs associated with the same.
