Abstracts

The Asia Pacific Human Growth Hormone Market would witness market growth of 9.7% CAGR during the forecast period (2019-2025).

The growth hormone helps in increasing height during childhood, raises calcium retention levels, strengthens and improves bone mineralization. It also increases the muscle mass through sarcomere hypertrophy, increases protein synthesis, promotes lipolysis, enhances the growth of all internal organs excluding the brain. The hormone has a key role to play in homeostasis, it helps to reduce glucose uptake by the liver.

Excessive release of growth hormones induces pituitary tumor, consisting of the anterior pituitary somatotroph cells. Such somatotroph cells are healthy and grow slowly, releasing excess growth hormones. This causes headaches, blurred vision due to pressure on the optic nerves, other hormonal deficiencies, and thickening of the bones of the jaw, toes, and fingers, which ultimately results in jaw heaviness and an increase in the size of the digits called acromegaly.

Growth hormone (GH) is a substance in the body that helps children grow and mature.

It is made by a pituitary gland, which is a small gland between the lobes of the brain. Growth Hormone Deficiency (GHD) is a well-known clinical condition in adults. It is characterized by defects in the metabolism of the substrate, body composition, physical and psychosocial functioning, all of which increase after GH replacement.

Based on Application, the market is segmented into Small for Gestational Age, Prader-Willi Syndrome, Idiopathic Short Stature, Turner Syndrome, Growth Hormone Deficiency and Other Applications.
