Abstracts

The Asia Pacific Hybrid Imaging Market would witness market growth of 5.83% CAGR during the forecast period (2019-2025).

Countries in Asia are also projected to see development in the next few years due to an increase in understanding of the early diagnosis of life-threatening diseases and developments in nuclear medicine. Market players are active in the production of advanced software for multimodal imaging devices in the region. For example, syngo.via by Siemens Healthineers integrates different technologies such as Pre-fetching, ALPHA Technology, SMART Layout and Findings Navigator that help to convert data collected by various multimodality imaging instruments such as PET/CT and SPECT/CT into descriptive reports.

The considerable importance of a combined analysis of anatomic and molecular data to diagnose diseases is a key driver of the global market for hybrid imaging systems. In addition to the advantages of hybrid imaging and its growing use in diagnostics, there is a significant opportunity for combination hybrid imaging PET or SPECT with MRI. Increased prevalence of chronic diseases, raised awareness of early diagnosis, and a higher number of diagnostic procedures are driving the market. Accreditation of the site, technologist training, medical training and high processing costs among the underprivileged are the major constraints of the market for hybrid imaging systems. Several hospitals, research centers, and research institutes are extensively installing hybrid imaging systems to determine their potential for various applications. It is a move that has sustained the steady growth of the market in recent years.

Based on Application, the market is segmented into Oncology, Ophthalmology, Cardiology, Brain & Neurology, and Other Applications. Based on Type, the market is segmented into PET/CT systems, SPET/CT systems, PET/MR systems, OCT/Fundus Imaging System and Other types. Based on End Use, the market is segmented into
