Abstracts

The Asia Pacific Infrared Imaging Market would witness market growth of 8.7% CAGR during the forecast period (2017 – 2023). The process of capturing and converting invisible infrared images into visible images is termed as infrared imaging. The radiations in the infrared imaging technique are generally emitted by the target objects or sometimes are reflected radiations. The imaging devices have infrared illuminator lasers with LEDs (Light Emitting Diodes) which is used for illumination. The infrared radiations emitted by warm objects are caught by thermal infrared imagers, directing them to infrared sensor array which are then converted electric signals and further into an image. Growing demand for infrared imaging cameras in the field of predictive maintenance has been a major factor contributing to the growth of the infrared imaging market. The nonindustrial vertical held the maximum market share within the overall infrared imaging market, due to its adoption in security and surveillance application.

Based on Wavelength, the Infrared Imaging market segments the market into Long-Wave Infrared, Mid-Wave Infrared, Shortwave Infrared, and Near Infrared. Based on Application, the market report segments the market into Security & Surveillance, Monitoring & Inspection, and Detection.
