## **Abstracts**

The Asia Pacific Insulin Storage Devices Market would witness market growth of 10.2% CAGR during the forecast period (2020-2026).

Insulin was originally considered a means of treatment primarily for people with type 1 diabetes. Over the years, however, a large number of Type 2 patients continued to use it as a line of therapy. The increasing demand for insulin has resulted in tremendous R&D activities in the manufacture of various painless types of insulin-supplied devices, such as continuous glucose monitoring (CGM), integrated insulin pumps, extremely accurate blood glucose monitoring devices (such as the flash glucose monitoring device), and improved lancets for a glucometer.

The main driving forces for the industry are the increasing prevalence of diabetes and the increasing use of advanced insulin delivery products. In fact, the growing demand for specialized storage solutions is already one of the market's key drivers. The insulin pump introduction has given rise to the demand for long-term insulin carrying solutions, which is projected to fuel business growth over the forecast period.

Type 1 diabetes patients generate little or no insulin and thus need medication throughout their lives. The appropriate storage solution is needed to conserve the insulin vials effectively. Within the prescribed range, the temperature decreases insulin potency. In addition, increased awareness of diabetes preventive care and effective use of insulin use are also contributing to market growth.
