Abstracts

The Asia Pacific Intelligent Building Automation Technologies Market would witness market growth of 9.1% CAGR during the forecast period (2019-2025).

Building Automation Systems is referred to a wireless or wired network of microprocessor-based controllers connected to different systems in a building. The technology can manage the equipment and optimize energy expenditure. It operates a building's controls from a centralized point that also implies that these systems can be monitored across the building from a small number of stations. Due to factors like growing concerns about global warming, raising energy prices, and increased awareness of energy conservation, the market has seen significant growth. The growing use of renewable energy sources and consumer awareness of the protection of the environment would drive the market further.

Throughout the forecast period, the market for building automation systems in APAC is expected to grow at the highest CAGR. The expected rise is due to the explosive growth of the construction sector in emerging countries including China and India. The growth has also been associated with the government's energy conservation initiatives for building automation systems. Countries like China and India have begun to develop smart cities aggressively. BAS is a key enabler for the respective countries to achieve these goals.
