## **Abstracts**

The Asia Pacific Laboratory Informatics Market would witness market growth of 8.6% CAGR during the forecast period (2019-2025).

An SDMS (Scientific Data Management System) works as a unified document management system, gathering, cataloging and storing data produced through and within a scientific laboratory. An SDMS is created to manage unstructured data from data systems such as LIMS or ELN. Labor researchers, analysts, scientists, and other laboratory personnel can easily store and search laboratory data and knowledge with an SDMS, accelerate workflows and approval processes and improve collaboration among staff. Any form of laboratory— clinical, research, contract, or pharmaceutical — can implement SDMS to achieve and guarantee data integrity and regulatory compliance as well as maintain a consistent source of truth.

The end-users are gradually embracing the Laboratory Information Management System (LIMS), as these systems address a wide range of research needs with their ability to provide an appropriate environment that is convenient to use throughout

multiple disciplines. Besides, technological advances in LIMS, replacement of old legacy LIMS with COTS LIMS, and the implementation of LIMS in bio banking, academic research institutes, and CROs lead to the largest market share and fastest growth in the forecast period.

Chemical industry organizations need to control costs, whilst also improving efficiency and quality. A Core Informatics LIMS can help chemical laboratories in addressing these objectives by increasing their throughput, monitoring data quality, enforcing SOPs, and enabling effective data and information management. The Core LIMS can help speed production decisions by offering a single data repository, alongside allowing for process and quality control.
