Abstracts

The Asia Pacific Manufacturing Operations Management Software Market would witness market growth of 12.1% CAGR during the forecast period (2019-2025).

MOM and supporting MES tools have made significant strides in getting orders for the plant, but they may not reach their full potential unless they can be used easily and model the real-world dynamics of the plant. Traditional approaches to MOM/MES can also be very static, locking in procedures which may become redundant the day they are enforced. Manufacturing Operations Management describes activity in terms of relationships between physical equipment, business rules, and user interfaces between the basic plant control system and the plant floor.

System platform offers a real-time, plant-wide platform that can be used by MES applications for blending the human and automated activities in the execution of

standardized business rules as well as processes. Workflow management software obtains reusable, model-compliant procedural components from different applications and uses them for business rule enforcement, operational execution, and change management. Graphical process and tools for developing user interfaces mitigate the need for intensive coding and complex APIs. Project execution changes from code-management to production management and standard operating procedures (SOPs). This model-driven approach brings previously independent manual operation into the field of automation besides merely ensuring procedural continuity across multiple sites.

Based on Component, the market is segmented into Software and Services. Based on Application, the market is segmented into Manufacturing Execution System (MES), Quality Process Management, Labor Management, Process & Production Intelligence, Inventory Management and Others.
