Abstracts

Non-volatile memory (NVM) is a type of secondary memory used in computer systems to manage permanent storage and backup facility for information that is critical to an organization. NVM technology is electrically programmable. It is also erasable when there is a need to make changes in a particular location within the storage device. Other than programming, erasing and storing, the technology also has the ability to retain changes even in the instance of power outage. The ever increasing demand for faster access and low power consumption memory devices has been the major factors contributing to the wide spread adoption of NVM majorly in consumer electronics, automotive and healthcare sectors. Nevertheless, low write endurance rate and limited storage capacity would be factors that would restrain the market growth.

The report highlights the adoption of Non-Volatile Memory in Asia-Pacific. Based on the type, the Non-Volatile Memory market is segmented into Electrically Addressed, Mechanically Addressed and Others. Electrically Addressed segment is further divided into ROM, NVRAM and Other Memory. Mechanically Addressed segment is further divided into Hard-Disk Drive, Optical-Disc Drive, Magnetic Tape, Millipede memory and Holographic data storage. Other Non-volatile memory types are FRAM, Zero-RAM, Nano-bridge and Molecular which are discussed in this report. Based on the application the market is segmented into Enterprise Storage, Healthcare Monitoring, Consumer Electronics, Automotive Application, Industrial and Others. The Verticals highlighted in this report include Telecom & IT, Healthcare, Automotive, Energy & Power, Manufacturing Industries and Others.

Based on Country, Asia-Pacific Non-Volatile Memory market is segmented into China, Japan, India, South Korea, Singapore, Malaysia and Rest of Asia-Pacific.
