Abstracts

The Asia Pacific Odor Control System Market would witness market growth of 8.1% CAGR during the forecast period (2020-2026).

In the end-use industries, Odor control systems are used for air purification, spring treatment and odor neutralization. The use of Odor control systems is of crucial importance as manufacturing plants emit odor to the environment and thereby degrade air quality. The foul Odors produced during plant operations may, however, also impede manufacturing plants' productivity. Therefore, the market is projected to experience substantial growth rate over the forecast period due to these issues.

In addition, rapid industrialization has greatly contributed to environmental pollution in a number of developing and industrialized countries. Thus, the increase in the number of manufacturing facilities has resulted in the unregulated emission of gases and chemicals into the atmosphere. This mixture of different gases and chemicals allows malodor to be released into the surrounding environment. However, increasing awareness among end-use industries about the use of odor control systems is creating further opportunities for market growth.

With a growing population, industrialization and urbanization, odor issues have reached an unacceptable proportion. Urbanization without adequate sanitation services is a big cause of Odor problems. Rapid industrialization has exacerbated the problem by odorous industrial operations. Odor control systems have enabled the industrial sector

to manage the emission of malodor material by processing odorous content. Industrial sectors such as the chemical industry, oil refineries & petrochemical industries, wastewater treatment plants, food & beverage, pulp & paper and manufacturing industries are among the major contributors to malodor development. The chemical industry accounted for more than 1/4 of the global market for odor control systems. Due to factors such as growing industrial emissions and regulatory policies by governing bodies, the adoption of odor control systems is expected to continue to increase, driving market growth.

Based on System Type, the market is segmented into Activated Carbon Odor Control System, Chemical Odor Control System and Biological Odor Control System. Based on End User, the market is segmented into Power & Energy, Chemical & Petro Chemical, Cement, Mining & Metal and Others. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
