Abstracts

The Asia Pacific Pain Management Devices Market would witness market growth of 10% CAGR during the forecast period (2020-2026).

A number of factors, such as the need for long-term pain management in the geriatric population, the large population base of patients, the negative effects of pain medicines, the development of new pain management technologies, identified reimbursement scenario for spinal cord stimulation (SCS) technologies in developing countries and the widely validated effectiveness of pain management devices for chronic pain treatment. On the other hand, factors such as low knowledge about the availability and usage of pain management devices, a shortage of pain specialists, a limited number of pain clinics in many countries, the presence of a disparity in the prevalence and treatment of chronic pain, and high clinical and purchasing costs of pain management devices hinder the market growth.

The Asia-Pacific region has become an enticing destination for companies engaged in pain relief system manufacturing. The high growth opportunities in this regional segment can be attributed to a variety of factors, including the growing prevalence of chronic diseases, improving the region's healthcare infrastructure, rising middle-class population and disposable income rates, and increasing knowledge of the protection

and efficacy of pain management tools.
