## **Abstracts**

The Asia Pacific Pediatric Imaging Market would witness market growth of 10.9% CAGR during the forecast period (2020-2026).

Pediatric imaging consists of diagnostic services such as MRI, X-ray, MRI, nuclear medicine, and computed tomography (CT). Pediatric radiology is based on the lowest possible radiation exposure and is called "Gently imaging." Pediatric imaging is not general radiology since it includes a broad variety of normal and abnormal variants. The key cause for the development of pediatric imaging is the rising frequency of diagnosis related to multiple disorders in children. In addition, rising demand for personalized testing would also fuel growth in the global pediatric imaging industry. In addition, training sessions sponsored by government and private organizations focused on pediatric radiologist preparation and advancement would also drive the growth of the pediatric imaging industry. The ultimate growth factor for the pediatric imaging market would be rapid collaborations between manufacturers and research institutes. The less emphasis and lack of awareness on the pediatric imaging market may be the restraint. As imaging specialism continues to penetrate the global healthcare environment, the use of imaging continues to gain ground in diagnostic and medical imaging operations, particularly in pediatric care. Protecting newborn babies from experiencing injuries

before or after birth has increased the need for radiology in pediatric diagnosis to use the subspecialty medical imaging science.

Based on End Users, the market is segmented into Hospitals, Diagnostic Centers and Others. Based on Modality, the market is segmented into Magnetic Resonance Imaging (MRI), Computed Tomography (CT), Ultrasound, X-ray and Others.
