## **Abstracts**

The Asia Pacific Portable UV Sanitizing Boxes Market would witness market growth of 16.2% CAGR during the forecast period (2020-2026).

UV sterilization is also known as UV disinfection or ultraviolet germicidal irradiation (UVGI) works by breaking down some chemical bonds and modifying the structure of DNA, RNA and proteins, rendering it difficult for the microorganism to reproduce. If a microorganism is unable to replicate, it is considered dead because it cannot reproduce within a host and is no longer contagious.

Consumers on the market for portable UV sanitizing boxes are more likely to buy such items as a result of growing awareness of the existence of various germs, bacteria, and possible viruses that cause human disease. UV portable sanitizing boxes are becoming increasingly popular due to their non-toxic and environmentally friendly nature. UV sanitizing is a dry sanitizing method and is used by both the residential and commercial sectors.

These factors are estimated to boost the demand among consumers for portable UV sanitizing boxes. In addition, the recent outbreak of transmittable disease COVID-19 is serving as a significant catalyst for the growth of the demand for portable UV sanitizing boxes between 2020 and 2021. Nevertheless, there is a strong preference for surface disinfection such as isopropyl alcohol wipes or general disinfection to scrub off both rough and non-porous surfaces. This is serving as a big obstacle to the growth of the demand for portable UV sanitizing boxes.

Based on Application, the market is segmented into Residential and Commercial. Based on Distribution Channel, the market is segmented into Online and Offline. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
