Abstracts

The Asia Pacific Private Cloud Server Market would witness market growth of 31.8% CAGR during the forecast period (2019-2025). Organizations transitioning from an on-premise legacy system also find it easier to move their workloads to the private cloud because it can be configured to suit any task. Successful migration is crucial to reaching the expected benefits of the new setting. This is another possible cause of a lower TCO than the public cloud due to a higher success rate of migration to private cloud. Once an organisation's technology needs and objectives are defined, it can decide whether the private cloud is the right type of IT environment or not.

The private cloud is the only viable option for some companies to ensure regulatory compliance. HIPAA requires that 'electronic protected health information' (e-PHI) is created, obtained, stored, and shared in a manner that maintains privacy, integrity, and availability. The Health Information Technology for Economic and Clinical Health Act (HITECH) has extended HIPAA's security and privacy protections. Liquid Web is HITECH-certified by a third-party auditor which guarantees companies that their private cloud infrastructure meets the requirements set by HIPAA's Privacy Rule and Security Rule. In cloud-based infrastructure, the cloud server market has been one of the fastest growing segments where the internet connects logical servers and physical servers. Physical servers are logically divided into two or more logical servers on the physical server. Although physical servers are not pooled or distributed, these servers are defined as dedicated cloud servers that are used exclusively for private cloud. Many companies are implementing cloud servers to minimize physical server installation infrastructure and IT costs.
