Abstracts

The Asia Pacific Proactive Services Market would witness market growth of 21.6% CAGR during the forecast period (2020-2026).

Proactive customer service ensures that the customer is contacted until he or she is conscious of the failure. While this may not be possible in every situation, when potential failures might be noticed and notified to the customer, companies can deliver an impressive level of customer service, build confidence and confirm that the customer has made the right decision to do business with you and your company. The main drivers of the growth are the huge costs incurred due to unplanned IT outages, increasing the size of your business. Proactive services help businesses recognize and address problems before they occur.

Organizations are providing self-service alternative with integrated knowledge as a part of their proactive strategy. This helps to reduce the time to resolve problems. These programs also aim to minimize expenses as they reduce the operational expenses of the working contact centres. For example, live chat facilities, as part of responsive offerings, serve as an efficient contact platform for current and future customers of the organization. This also resulted in increased sales and enhanced consumer service.

The global rise in urbanization and digitization has prompted companies to turn to technology-driven approaches to achieve accelerated business growth. The use of cloud technologies helps numerous small and medium-sized businesses to introduce new solutions at affordable costs without the need to update or modify applications frequently. In addition, factors such as increasing organizational flexibility and improving consumer service fuel market growth coupled with the discovery of new sources of revenue.
