Abstracts

The Asia Pacific Pyrometer Market would witness market growth of 7.7% CAGR during the forecast period (2017 – 2023). Varying emissivity of an object or surface is limiting the growth of the pyrometer market. All the radiating objects or surfaces have a specific emissivity behavior, which leads to a need for complex designing of the pyrometer. However, surface properties of the material changes during the manufacturing process, and as a result, changing the emissivity of the object or surface. It is therefore difficult to design a pyrometer which can accurately measure the temperatures of the objects having different emissivity levels; hence, varying emissivity of objects and surfaces would be a factor limiting the growth of the pyrometer market.
