Abstracts

The Asia Pacific Radio Frequency (RF) Components Market would witness market growth of 15.4% CAGR during the forecast period (2019-2025). An increase in smartphone sales due to frequent product development with better performance, long battery life, biosensors, and more AI features and rising popularity of low-end smartphones in emerging countries will also boost the demand for RF components. It is expected that the need for low-power ICs to optimize battery life and reduce charging time in smartphones would fuel demand for RF components. It is anticipated that increased IoT adoption through industrial, residential, and consumer applications would fuel product demand.

The radio frequency is used in many areas, which refers to a frequency range where wireless telecommunications signals are transmitted and broadcast in conjunction with information and communication technologies. The frequency band is split into various parts, which are then allocated to different industries of technology. This is defined as the spectrum of radio. For example, for FM radio, TV broadcasts, and amateur radio and their counterparts, the VHF (very high frequency) band that ranges from 30-300 MHz is used. The ultra-high frequency (UHF) band is used for many electronic communication systems. This is the space that wireless LAN, mobile phones, television, Bluetooth, and land radio use.

Based on Product, the market is segmented into Power Amplifier, Filters, Antenna Switches, Modulators & Demodulators, Duplexer and Others.
