Abstracts

The Asia Pacific Radiology Information System Market would witness market growth of 8.8% CAGR during the forecast period (2019-2025).

Radiology information systems can provide a wide range of benefits. These benefits include better efficiency, value-added patient coordination, and a significant reduction in data entry errors. Well-designed RIS software allows the workers to use fewer mouse clicks and keystrokes while they input more information. It increases the productivity of workers as they make better use of their time. One of the key benefits that RIS provides includes fewer data entry mistakes.

Through the installation of this technology, the staff would have a lower possibility of making data entry errors. Templates in the application direct the input of data to ensure that, for example, a team member does not miss out on a vital piece of information before progressing to the next screen. Fewer mistakes in data entry help to save money and accomplish a faster processing time of patient information. This is a primary motivator for several radiology practice owners and managers. Most RIS features streamline administrative functions, which helps to save large amounts of money on overhead costs. Having less administrative staff might even assist in doing more work. Based on Mode of Deployment, the market is segmented into Web-based, On-premise and Cloud-based. Based on Product, the market is segmented into Integrated Type and Standalone Type. Based on End Use, the market is segmented into Hospitals & Clinics, Outpatient Department (OPD) Clinics and Others. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
