Abstracts

The introduction of wide range of applications and an unprecedented growth in cyber threats have led to need for security testing services. Growing incidences of security breaches have compelled the organizations to incorporate security testing solutions to combat threats and potential system vulnerabilities. Limited domain specific tools and knowledge about security testing and higher deployment and maintenance costs are expected to act as restraints to the market growth.

The security testing market is broadly classified into application services, application types, tools, deployment models, industry verticals and network services. Application services include enterprise/desktop application, mobile application, web application and cloud application. Application types are bifurcated into SAST (Static Application Security Testing) and DAST (Dynamic Application Security Testing). The tools segment is categorized as automated testing tools, code review tools, penetration testing tools and web testing tools. Based on deployment models, the market is bifurcated into on-premise deployment and cloud deployment.

Some of the industry verticals that deploy security systems would be retail, healthcare & life sciences, BFSI, IT & Telecom, and Government & Public utilities. Network services include Intrusion Detection System and Intrusion Prevention system (IDS/IPS) testing, Virtual Private Network (VPN) testing, firewall testing, and Universal Resource Locator (URL) / Unified Threat Management (UTM) testing.

Based on Country, Asia-Pacific Security Testing market is segmented into China, Japan, India, South Korea, Singapore, Malaysia and Rest of Asia-Pacific. China remained the dominant Country in the Asia-Pacific Security Testing market in 2015. Malaysia would witness highest CAGR during the forecast period (2016-2022).

The report covers the analysis of key stake holders of the Security Testing market. Key
