Abstracts

The Asia Pacific Smart Biopsy Market would witness market growth of 6.58% CAGR during the forecast period (2019-2025).

According to the World Cancer Report, there will be 15 million additional cases of cancer by the end of 2020. The worldwide pervasiveness of cancer diseases like lung cancer, breast cancer, prostate cancer, etc., would drive the market scenario. People are more health-conscious these days and switch to minimally invasive techniques over traditional techniques in order to ensure complete security.

Current diagnostic tools for cancer involve invasive procedures like biopsies. However, if the lesion was better defined, such painful procedures could be avoided in many cases. In addition, the increased costs of these invasive biopsies and their association with painful procedures often put patients in a position of avoiding or delaying the procedure. This leads to an insufficient diagnosis of people or diagnosis of patients at a later stage of the disease.

The Asia- Pacific region is anticipated to experience the highest growth rate over the forecast period. This rapid growth rate can be attributed to extensive government initiatives, healthcare spending, cancer awareness campaigns, and the availability of technologically advanced smart biopsy devices. The Indian Government has announced two major initiatives in the healthcare sector, namely the Ayushman Bharat Program and the National Health Protection Scheme.

Based on Application, the market is segmented into Breast cancer, Skin cancer, Liver cancer, Prostate cancer and Others. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
