Abstracts

The Asia Pacific Stroke Management Market would witness market growth of 8.2% CAGR during the forecast period (2018 – 2024). Stroke is a medical emergency which occurs when the flow of the blood is restricted to the brain and as a result, brain cells start dying. Rise in incidence and prevalence of chronic diseases has been a major factor that is responsible for the growth of the stroke management market. Additionally, growing geriatric population, which is highly susceptible to strokes, growing diabetic population and usage of tobacco are other factors that are driving the growth of the market. However, the cost associated with the treatment and stringent government regulations pertaining to the approval of new and advanced devices and drugs would limit the market growth. Asia-Pacific is the region with tremendous market potential, due to rising prevalence of strokes, which is due to growing incidence of chronic diseases and use of tobacco.
