Abstracts

The Asia Pacific Surgical Drains Wound Drainage Market would witness market growth of 5.0% CAGR during the forecast period (2018 – 2024).

The regular use of drains in surgical procedures has been diminishing over the years, as better radiological investigation and confidence in surgical techniques have limited the need for the same. With advancements in the field, it is found that drains could hinder recovery by acting as an 'anchor' and at the same time limiting mobility post-surgery. It is also found that the use of drains may lead to infections in the wound. Despite the case, the use of drains is inevitable in some cases. The growing demand for advanced wound care products in several Asian countries, rising geriatric population, an increasing number of surgical procedures, rising prevalence of chronic as well as diabetic wounds, and product enhancements are some of the key factors driving the growth of the surgical drains market in Asia Pacific region.

Based on Product, the market is segmented into Accessories, and Surgical Drainage Systems. Based on Type, the market is segmented into Active Drains and Passive Drains. Based on End User, the market is segmented into Hospitals and Ambulatory Surgical Centers (ASCS) & Clinics.
