Abstracts

The Asia Pacific Surgical Lights Market would witness market growth of 7% CAGR during the forecast period (2020-2026).

The growth in regulatory approvals for operating room services, combined with a growing emphasis on delivering quality patient treatment through various healthcare facilities, is expected to boost the market for surgical lighting. Factors such as rising product supply, high demand for well-equipped operating rooms by healthcare practitioners and surgeons, and accessibility of healthcare facilities, particularly in developing economies, are projected to further fuel the growth of the market for surgical lights

LED technology has reduced power usage in medical facilities by almost 80 percent. There has been a substantial rise in dental problems in all age groups due to eating habits, improper oral care, and lifestyle improvements. Surgical lights are therefore also commonly used in dental clinics. Technological advancement in order to address the drawback of modern surgical light sources is expected to drive market growth.

The advent of fiber optics with controlled light emission properties that allow it to penetrate deep cavities, the rise in the number of surgical procedures performed in various clinical fields, the proliferation of lifestyle diseases needing surgical treatments, and the rise in healthcare spending potential worldwide are factors that are expected to drive the growth of surgical lighting. Nevertheless, the high cost of production, the expense of installing advanced LED lights, and the lack of knowledge of new installations may limit the growth of the market for surgical lights.

Based on Type, the market is segmented into Halogen and LED.

Based on Application, the market is segmented into Cardiac Surgery, Gynecological Surgery, Neurosurgery, ENT Surgery and Others. Based on countries, the market is segmented into China, Japan, India, South Korea, Singapore, Malaysia, and Rest of Asia Pacific.
