## **Abstracts**

The Asia Pacific Surgical Retractor Market would witness market growth of 7.2% CAGR during the forecast period (2020-2026).

Despite globally increasing infections of Covid-19, the apprehension of the shortage of critical life-saving equipment and other essential medical resources to deter the dissemination of this pandemic is also expanding and ensuring optimal treatment for the infected. In addition, before pharmacological treatment is established, ventilators acted as a vital treatment choice for COVID-19 patients who may need critical care. In addition, there is an immediate need for rapid acceleration in the production cycle for a wide range of test kits (antibody tests, self-administration, and others).

Technological developments have also supplemented the expansion of the global demand for surgical retractors. Such advances in surgical technologies and equipment have changed clinical practices in the past few decades. A primary illustration of this is the advent of tools such as activated, single-use, laparoscopic retractors. An increased global geriatric population is expected to fuel the market in the future.

These devices are used in the diagnosis of multiple degenerative spinal diseases such as lumbar spinal stenosis, spine herniation, foraminal compression with unilateral

radiculopathy, synovial cysts, and dural repair. The prevalence of spinal injury is growing increasingly worldwide due to the influence of factors such as aging of the population and evolving behaviors, an emerging phenomenon that is projected to fuel demand for the MIS Surgical Retractor System over the forecast era.

Based on Application, the market is segmented into Abdominal Surgeries, Orthopedic Surgeries, Obstetric & Gynecological Surgeries, Cardiothoracic Surgeries and Other Applications.
